H_2^3

#wiki/Man/R/3

The 3 dimensional handlebody of genus 2, H_2^3 is a compact 3-manifold with a connected boundary diffeomorphic to T_2^2 obtained by attaching two 1-handles to the 3-ball.

It deformation retracts to $S^1 \wedge S^1$. The fundamental group is isomorphic to F_2.

hyperbolic metrics

Current note has 0 direct children and 0 total descendants.

- stretchy
  - H_2^3

And it has 62 siblings.
