Infinitely generated Fuchsian groups

[1]

geometrically infinite

$\Lambda = \text{Cantor set}$

$\Lambda = \partial$

$[\Gamma(2), \Gamma(2)]$

$\mu = \infty$

Question

Is there an *infinitely generated Fuchsian group* (say $\Gamma \leq PSL(2)(\mathbb{Z})$) which has infinitely many conjugacy classes of maximal elliptic subgroups $\leftrightarrow$ elliptic points on $D(\Gamma)$?

Current note has 0 direct children and 0 total descendants.
